Iteration 4 Report

What Went Right:
- **Created a user registration and login process and connected the forms to correctly send and receive data from the database.**
- **Created a transaction page that is specific to the user that is signed in.**
- **A plan on how to add notification rules to our web application, and how to store them.**

What Went Wrong:
- **While we have our path defined as to how to reach our goals, production is a little scattered.**
- **Will have to ramp up production in these final few weeks to make sure all goals are met for the final product.**

Solutions:
- **While we all have different classes and things going on at this time, we will start to turn our focus on finishing up this project before the upcoming deadline.**
- **We will meet more often to make sure all members are on the same page moving forward.**
